

This is Ali, He lives in Karachi. He have a regular power shut down at his house. So he have installed smart generator at his home.

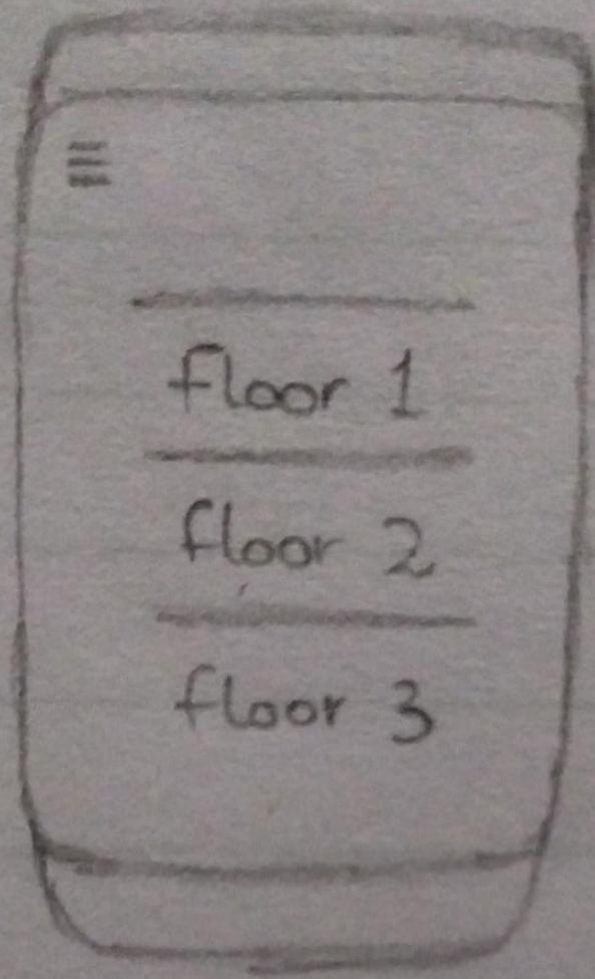

As the power shuts he quickly opens the smart generator app in his smart phone and starts the generator remotely without going near the actual generator

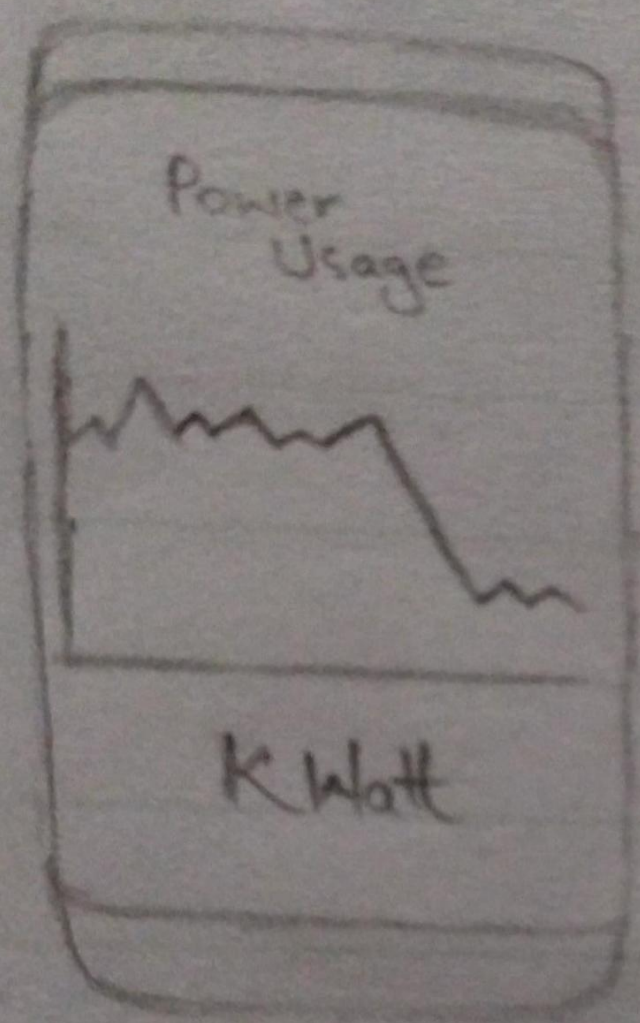

After some regular usage of the generator the app notify Ali about the low fuel in the generator.

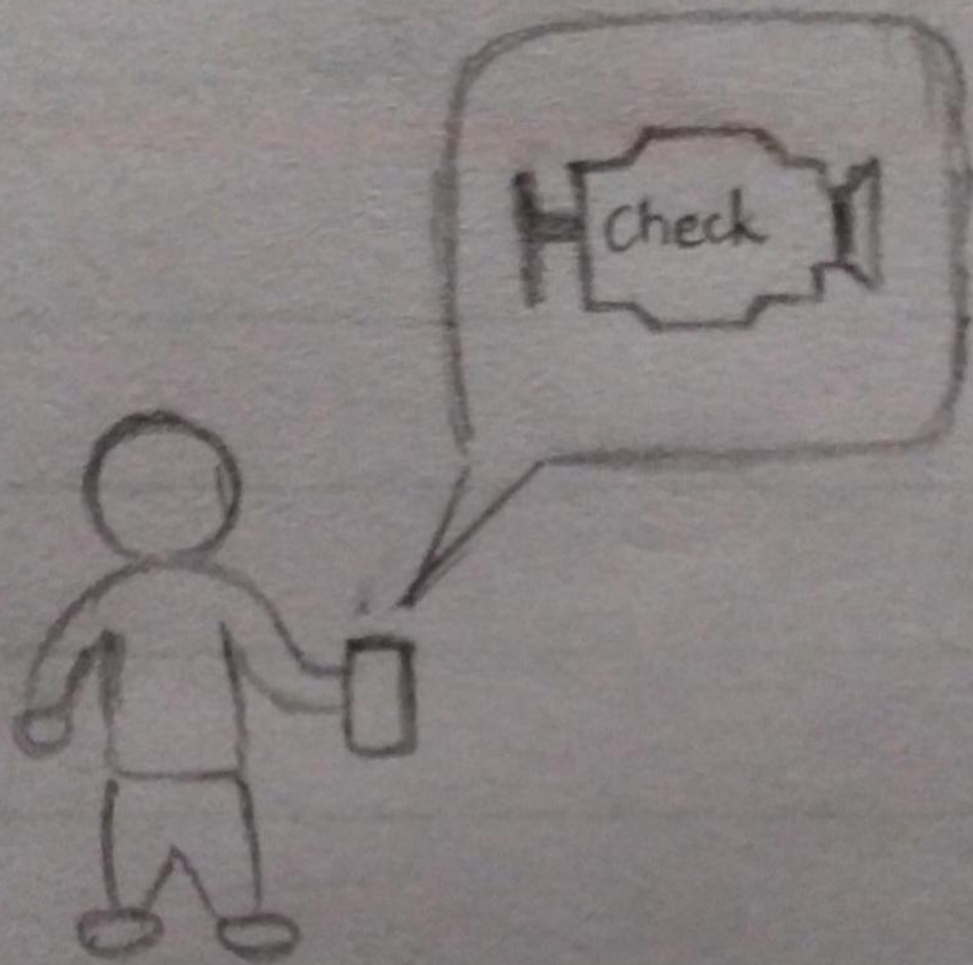

Ali quickly restrict the supply of power from the app to the necessary areas at home to save the power and fuel usage.

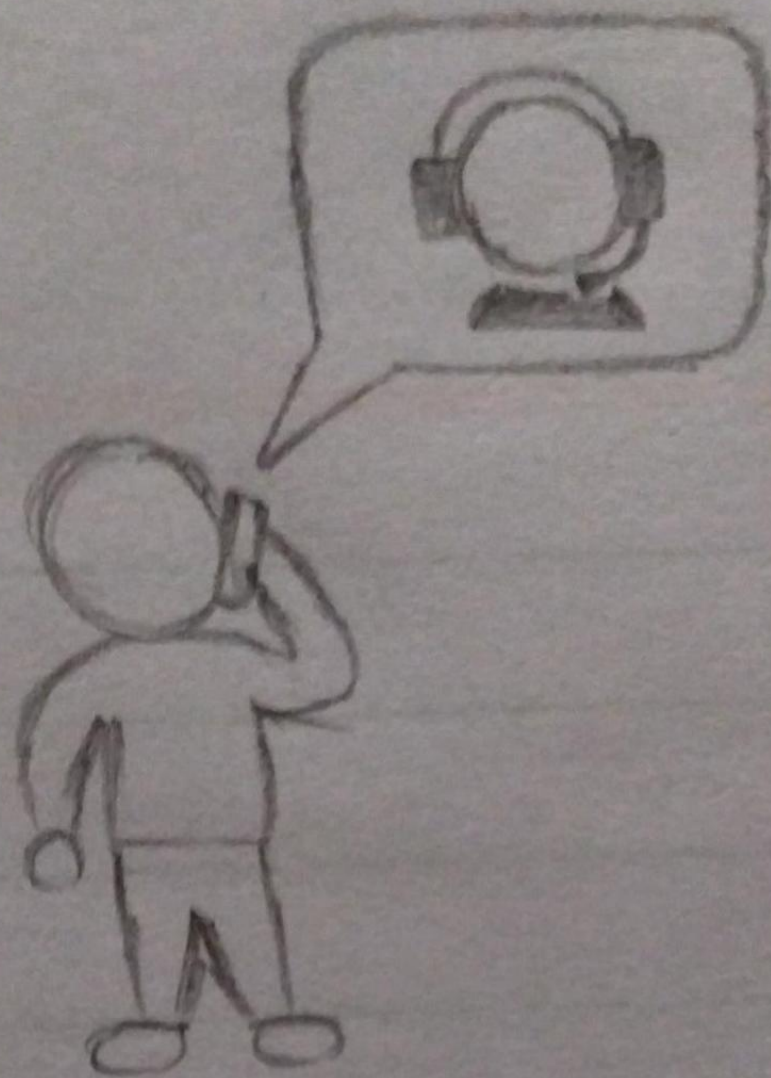

As soon as Ali restrict the power supply he checks that there is a drop in power usage.

later after the fair usage the app notifies him to check any mechanical issues.

Ali Contacts the customer support directly from the app and the team resolve the issue.

Now, Ali is greatful  
that he does not have to  
worry about the power  
shut down.
